

## Earth Science Story

Name \_\_\_\_\_

Write a story about what it would be like to be a rock going through the rock cycle. Imagine that you are the rocks. You are obviously going to be changing quite a bit during the rock cycle. Take me through all of the stages (magma, lava, igneous rock, erosion of igneous rock, transport of sediment, deposition of sediment, compaction and cementation of sediment, metamorphism, melting of metamorphic rock, back to magma again!) Remember you are the rock! What does it feel like...how do you feel? This story should be well-written and very detailed. It should probably be *at least 2* hand-written pages long. Have fun!!
